Himanshu Mehra

Bahadurgarh | mehrahoney638@gmail.com | +91 8397904350 | LinkedIn: linkedin.com/in/himanshu-mehra-ba97a1213

EDUCATION

University Institute of Engineering & Technology, MDU **Rohtak, India**
Master of Computer Applications (MCA) *2020-2022*

- **Concentrations:** Java Development, Software Engineering,
- **Related Coursework:** Object-Oriented Programming (OOP), Computer Networking, Computer Organization & Programming, Database Management Systems (DBMS), Data Structures & Algorithms, .NET Framework, Statistics & Applications, Mobile Application Development (Android), Web Development

EXPERIENCE

Servoedge Technologies Private Limited, **Noida, India**
Project Lead- Java|.Net , **February 2025–Present**

- Leading backend architecture and development across **B2B EdTech** and **real-time AI communication platforms**, owning system design, scalability, and production readiness.
- Architected and delivered **PrepFi**, a microservices-based educational platform using **.NET Core** and **React**, enabling role-based access for teachers, parents, and students.
- Designed and implemented **REST-based inter-service communication**, optimized database schemas, indexing strategies, and background services for high-performance query execution.
- Built a **gamified assessment and tournament engine**, boosting user engagement and improving report generation speed by **45%**.
- Led development of a **real-time multilingual voice translation system** using **Java microservices**, enabling live communication between English-speaking agents and French, Spanish, Arabic, and Chinese-speaking customers.
- Integrated **speech-to-text, translation, and text-to-speech pipelines** leveraging **Google Cloud AI/ML services** and **Vonage Voice APIs** for seamless inbound and outbound call translation.
- Designed a **low-latency, event-driven architecture** with asynchronous processing to support high call volumes and real-time conversations.
- Engineered **live agent dashboards** featuring real-time transcripts, translation logs, call analytics, and performance metrics.
- Collaborated on **domain-specific AI model fine-tuning**, achieving approximately **90% translation accuracy** in live production testing.
- Deployed and scaled services using **Docker** and **Google Cloud Run**, ensuring high availability, resilience, and minimal latency.
- Mentored junior developers, led sprint planning, enforced coding standards, and collaborated cross-functionally with product, frontend, and QA teams to deliver features on schedule.

Xtreme Softech Private Limited, **Gurugram, India**
Software Development Engineering, *August 2022–February 2025*

- Developed a robust Java REST API using the Spring framework and Hibernate for efficient storage of user-entered data in the database.
- Updated old code bases to modern development standards, resulting in a 40% increase in functionality and maintainability
- Collaborated with cross-functional teams to design, develop, and launch innovative software solutions, leading to a 25% increase in customer satisfaction.
- Collaborated with the DevOps team to deploy and manage applications on AWS and Azure cloud platforms, ensuring optimal performance and scalability.
- Spearheaded the development and implementation of .NET Core applications, leveraging C# and VB.NET to meet business requirements and enhance functionality.
- Successfully automated key business processes using UiPath, resulting in a significant increase in operational efficiency and a reduction in manual errors.
- Proficient in cloud platforms such as AWS and Azure, with hands-on experience in managing Windows instances and Ubuntu servers.

PROJECTS

Real-Time Multilingual Conversational Translator **Auguest 2025 – Present**
Servoedge Technologies Pvt. Ltd. | Project Lead – Java Backend Developer

- Built a real-time voice translation system enabling live multilingual communication between English-speaking agents and French/Spanish/Arabic/ Chinese speaking customers. Integrated speech-to-text, translation, and text-to-speech pipelines using Google Cloud AI/ML and Vonage Voice APIs for seamless inbound/outbound call translation.
- Ensured low-latency processing using microservice architecture, asynchronous event handling and optimized API orchestration.
- Engineered live agent dashboards with real-time transcript display, translation logs and performance analytics.
- Collaborated on AI model fine-tuning for domain-specific vocabulary, achieving average 90% translation accuracy in live testing.
- Deployed scalable services using Docker and Google Cloud Run, ensuring reliability and minimal latency under high call volumes

PrepFi – Microservices-based EdTech Platform **February 2025 – Present**
Servoedge Technologies Pvt. Ltd. | Project Lead – .NET Developer |

- Spearheading the design and development of PrepFi, a B2B educational platform built on a .NET microservices architecture with a React frontend.
- Architected and implemented core microservices using .NET Core, ensuring modularity, scalability, and ease of maintenance.
- Integrated role-based access control allows teachers to generate reports and assign tests, while parents can track student performance.
- Collaborated with product managers and frontend teams to deliver interactive UI components and a seamless user experience.
- Managed inter-service communication via REST APIs and background services and ensured efficient database design and indexing for fast queries.
- Improved report generation speed by 45% and boosted user engagement through gamified tournament features.
- Led junior developers and coordinated across sprints to deliver features on time, ensuring code quality, test coverage, and best practices.

Astro App
Servoedge Technologies Pvt. Ltd. | Technical Architect **June-2025**

- Revamped the Astro App UI/UX and delivered the full solution architecture and HLD optimized to support One million Concurrent users after
- discovery and analysis, improving scalability and maintainability.
- Coordinated with product and engineering teams to ensure the new design met performance, security, and scalability goals

Hunting Insurance / Spring Boot Project / Xtreme Softech Pvt. Ltd. Team Member *Jan. 2022–Present*

- A web portal for hunters to effortlessly purchase insurance. Users can quickly secure coverage by responding to a concise set of questions. We also created a service for the payment confirmation issue we were facing.

Bicyclic Insurance/Spring Boot Project/Xtreme Softech Pvt. Ltd. ***Team Member*** *Jan. 2023–Present*

- An API-based application where the user fills in their bicycle details and gets an email where they get the offer and a payment link via which they can pay the premium amount for the insurance to buy the policy and receive the policy document via email.

Collection Entry Automation/Uipath Project/Xtreme Softech Pvt. Ltd.

- Tools & Platforms: UiPath, Oracle Database, SMTP, IMAP, Excel, ERP
- Collects and creates payments in ERP based on input from Outlook mailbox, saves records in Oracle database.

Order Entry Automation/Uipath Project/Xtreme Softech Pvt. Ltd.

- Tools & Platforms: UiPath, Oracle Database, SMTP, IMAP, Excel, ERP
- Environment: Windows OS
- Creates order numbers in ERP based on input from Outlook mailbox, saves records in Oracle database.

PERSONAL PROJECTS

Uber Clone Boot Project https://github.com/honeymdu/UberApp

Developed a **ride-booking application** backend in **Spring Boot**, allowing users to book rides seamlessly.

- **Ride Booking Strategy**: Built features like authentication and authorization with Spring Security and implemented a ride booking strategy with multiple design patterns, which can reduce the ride waiting time by 50%.
- **Complete Ride Flow Management: Handled** the complete flow of the ride booking application, from ride request via riders to the queue, then had the ride accepted via the drivers to the payment handling via wallets.
- **Real-Time Navigation & Tracking**: Integrated **OSRM API** for **real-time route optimization and distance calculation**, improving **ETA accuracy** and **ride efficiency**.
- **Geospatial Data Management**: Utilized **PostgreSQL with PostGIS** to store and query **geospatial data**, enhancing ride matching and route calculations
- **Payment Handling:** Supported **wallet-based transactions** and **Cash on Delivery (COD)** for flexible payment options for ride bookings

Zomato Clone Spring Boot Project https://github.com/honeymdu/zotatoFoods

Developed a **Zomato-like food ordering application** backend in **Spring Boot**, allowing users to browse restaurants, place orders, and make payments.

- **Authentication & Authorization**: Secured user access using **Spring Security** and **JWT**.
- **Order Management**: Implemented a structured order placement, tracking, and payment system using **design patterns** to optimize efficiency.
- **Optimized Order Assignment**: Designed an **order allocation strategy** based on **order priority and restaurant priority**, reducing food delivery time by **up to 50%**
- **Real-Time Location Tracking:** Integrated **OSRM API** for **real-time location data**, improving delivery route efficiency.
- **Geospatial Data Management**: Utilised **PostgreSQL with PostGIS** to store and query **restaurant and user locations**, improving order assignment and delivery efficiency.
- **Payment Handling:** Supported **wallet-based transactions** and **Cash on Delivery (COD)** for flexible payment options**.**

LinkedIn App Clone Spring Boot Project

Developed a **LinkedIn-like social networking application** backend using a **microservices architecture** in **Spring Boot**, enabling seamless user interactions, connections, and content sharing

- **Technology Stack:** Spring Boot, Eureka Discovery Server, API Gateway, Neo4j, Feign Client, Kafka, JWT, Docker
- **User Service:** Handled user authentication and registration using JWT.
- **Post Service:** Implemented functionality for creating posts, likes, and comments.
- **Connection Service:** Leveraged Neo4j for modelling and managing user connections.
- **Notification Service:** Integrated Kafka for real-time messaging and notifications.
- **Implemented** service discovery and routing using Eureka Discovery Server and API Gateway.
- **Facilitated** inter-service communication using Feign Client.
- **Containerised** each microservice using Docker for streamlined deployment and scalability.

SKILLS

Programming: Java, C#,
Frameworks & Technologies: .Net, Spring Boot, JPA, JWT, Hibernate ORM, Maven, Microservices, REST APIs,
Messaging Protocols: Kafka
Database Technologies: MSSQL, PostgreSQL, MongoDB
Cloud Services: AWS, Azure,Google Cloud Platform
Development Tools: IntelliJ IDEA, Visual Studio Code, Maven, Docker, Postman, Visual Studio
Version Control & Repositories: GitHub, AWS Code Commit, Bitbucket, Azure Repos
Core Competencies: Backend Development, Microservices, Debugging, OOPs, API Development, Performance Optimization
Robotic Process Automation (RPA): UiPath

Certifications

• Java Backend Development
• Docker Essentials
