PROFESSIONAL SUMMARY

Java Backend Developer with **4+ years of experience** designing and building **scalable backend applications** using **Java, Spring Boot, Microservices, REST APIs, Spring Security, PostgreSQL, Redis, Docker, and AWS**. Experienced in developing **production-grade APIs**, **distributed systems**, **asynchronous event-driven architectures**, and **high-performance backend services**. Led backend development for a **real-time multilingual voice translation platform**, architected **scalable microservices** for an **enterprise EdTech platform**, and designed **end-to-end backend solution architecture** and **High-Level Design (HLD)** for a **cloud-native application**. Strong expertise in **system design**, **backend architecture**, **API development**, **database optimization**, **security**, **scalability**, and **cross-functional collaboration.**

EDUCATION

University Institute of Engineering & Technology, MDU — **Rohtak, India**
Master of Computer Applications (MCA) — *2020-2022*

SKILLS

Languages: Java

Backend: Spring Boot, Spring Security, Hibernate ORM, JPA, REST APIs, Microservices, JWT Authentication

AI/ML: Spring AI 1.0, Claude Models, Ollama (LLaMA 3.2),Retrieval-Augmented Generation (RAG), Qdrant Vector Store, Embeddings, Prompt Engineering, Function Calling

Messaging & Service Discovery: RabbitMQ,Spring Application Events (Pub/Sub), Eureka Discovery Server,Spring Cloud Gateway, OpenFeign (Feign Client)

Databases & Caching: PostgreSQL,Redis,Microsoft SQL Server (MSSQL),MongoDB

Cloud & DevOps: AWS, Google Cloud Platform, Docker, Docker Compose, GitHub Actions

Tools: IntelliJ IDEA, VS Code, Postman, Git, GitHub

Additional Experience: .NET Core, C#

EXPERIENCE

Binary Semantics Limited, — **Gurugram, India**
Software Developer – Java , — **August 2026–Present**

- Contributing to the design, development, and enhancement of **enterprise backend applications**, with a focus on scalable, maintainable, and high-performance solutions.
- Developing robust **RESTful APIs and microservices using Java and Spring Boot**, with emphasis on clean architecture, business logic, integration, and maintainability.
- Translating complex business requirements into **reliable backend services and API-driven solutions**, ensuring alignment between functional requirements and technical implementation.
- Designing and implementing **business workflows, validations, data processing, and service integrations** across enterprise application modules.
- Working with relational databases to develop efficient **data access logic, queries, and transaction-oriented business operations**.
- Performing comprehensive **API testing, debugging, and troubleshooting** across development and QA environments using tools such as Postman.
- Investigating application issues, identifying root causes, implementing corrective solutions, and supporting **deployment and environment-level troubleshooting**.
- Working across the complete development lifecycle, including **requirement analysis, solution design, implementation, testing, debugging, deployment, and maintenance**.
- Collaborating with developers, QA engineers, business stakeholders, and cross-functional teams to deliver features while maintaining **code quality, reliability, and development standards**.
- Contributing to **Marine Insurance domain solutions**, gaining experience in enterprise insurance workflows, policy and certificate processing, and transaction-driven business operations.

Servoedge Technologies Private Limited, **Noida, India**
Project Lead – Java Backend Developer, **February 2025–June 2026**

- Leading backend architecture and development across B2B EdTech and real-time AI communication platforms, driving system design, scalability, and production readiness.
- **Architected and delivered PrepFi**, a scalable microservices-based B2B educational platform, designing REST APIs, backend services, role-based access control (RBAC), and optimized database models for teachers, parents, and students.
- Designed and implemented **REST-based inter-service communication**, optimized database schemas, indexing strategies, and background services to improve application performance and scalability.
- Built a gamified assessment and tournament engine, improving user engagement and reducing report generation time by **75%**.
- Led the development of a **real-time multilingual voice translation platform** using **Java, Spring Boot, and microservices**, enabling live communication between English-speaking agents and French, Spanish, Arabic, and Chinese-speaking customers.
- Integrated **Google Cloud Speech-to-Text, Translation, Text-to-Speech**, and **Vonage Voice APIs** for seamless inbound and outbound voice translation.
- Designed a **low-latency event-driven architecture** using asynchronous processing to support high call volumes and real-time conversations.
- Deployed and scaled containerized services using **Docker** and **Google Cloud Run**, ensuring high availability, resilience, and minimal latency.

Xtreme Softech Private Limited, **Gurugram, India**
Software Development Engineering, ***August 2022–February 2025***

- Developed a robust Java REST API using the Spring framework and Hibernate for efficient storage of user-entered data in the database.
- Updated old code bases to modern development standards, resulting in a 40% increase in functionality and maintainability
- Collaborated with cross-functional teams to design, develop, and launch innovative software solutions, leading to a 25% increase in customer satisfaction.
- Collaborated with the DevOps team to deploy and manage applications on AWS and Azure cloud platforms, ensuring optimal performance and scalability.
- Spearheaded the development and implementation of .NET Core applications, leveraging C# to meet business requirements and enhance functionality.
- Successfully automated key business processes using UiPath, resulting in a significant increase in operational efficiency and a reduction in manual errors.
- Proficient in cloud platforms such as AWS and Azure, with hands-on experience in managing Windows instances and Ubuntu servers.

PROJECTS

Real-Time Multilingual Conversational Translator **August 2025 – June 2026**
Servoedge Technologies Pvt. Ltd. | Project Lead – Java Backend Developer

- Built a real-time voice translation system enabling live multilingual communication between English-speaking agents and French/Spanish/Arabic/Chinese-speaking customers. Integrated speech-to-text, translation, and text-to-speech pipelines using Google Cloud AI/ML and Vonage Voice APIs for seamless inbound/outbound call translation.
- Ensured low-latency processing using microservice architecture, asynchronous event handling and optimised API orchestration.
- Engineered live agent dashboards with real-time transcript display, translation logs and performance analytics.
- Collaborated on AI model fine-tuning for domain-specific vocabulary, achieving average 90% translation accuracy in live testing.
- Deployed scalable services using Docker and Google Cloud Run, ensuring reliability and minimal latency under high call volumes

PrepFi – Microservices-based EdTech Platform live at - prepfi.ai **February 2025 – June 2026**
Servoedge Technologies Pvt. Ltd. | Project Lead – Backend Developer

- Architected and delivered **PrepFi**, a scalable microservices-based B2B educational platform supporting teachers, parents, and students.
- Designed and developed scalable **REST APIs**, backend services, and inter-service communication to support modular and maintainable application architecture.
- Implemented **Role-Based Access Control (RBAC)**, enabling teachers to generate reports and assign tests while allowing parents to track student performance.
- Designed and optimized relational database schemas, indexing strategies, and query performance for high-volume reporting.
- Built and maintained asynchronous background services to improve system performance and automate backend workflows.
- Improved report generation performance by **75%** and increased user engagement through gamified assessment and tournament features.
- Collaborated with product managers, frontend developers, and QA teams to deliver production-ready features.

PERSONAL PROJECTS

Zomato Clone Spring Boot Project

Developed a **Zomato-like food ordering application** backend in **Spring Boot**, allowing users to browse restaurants, place orders, and make payments.

- Built a multi-role food delivery backend (Consumer, Restaurant Partner, Delivery Partner, Admin) with **Spring Security + JWT** authentication and fine-grained role-based authorization
- Designed an intelligent order assignment engine using a **dual priority queue (restaurant + order priority)** with a dedicated thread pool executor, reducing delivery assignment latency by up to 50%
- Integrated **Spring AI 1.0 with Ollama** to deliver 16+ AI features: food recommendations, semantic menu search (Qdrant vector store + embeddings), customer support chatbot with function calling **(@Tool + ChatMemory)**, restaurant analytics, RAG knowledge base, SSE streaming, multimodal image analysis, sentiment analysis, and content moderation (SafeGuardAdvisor)
- Built **semantic vector search** using Qdrant + nomic-embed-text embeddings; menu items embedded on save and searched via cosine similarity for natural language queries
- Implemented **Redis caching (RedisCacheManager, per-cache TTL)** and **distributed locking** for OTP rate limiting, reducing redundant DB and LLM calls
- Integrated **OSRM API** for delivery route calculation; used **PostgreSQL with PostGIS** for geospatial storage and querying of restaurant/user coordinates
- Engineered **wallet-based payments** and COD with @Transactional atomicity across multiple balance operations; implemented live delivery partner location tracking
- Containerised full infrastructure with **Docker Compose** (PostgreSQL/PostGIS, Redis, Ollama with auto model pull, Qdrant) enabling one-command team setup; separated config with **Spring Boot dev/prod profiles**

LinkedIn App Clone Spring Boot Project

Developed a **LinkedIn-like social networking application** backend using a **microservices architecture** in **Spring Boot**, enabling seamless user interactions, connections, and content sharing

- **Technology Stack:** Spring Boot, Eureka Discovery Server, API Gateway, Neo4j, Feign Client, Kafka, JWT, Docker
- **User Service:** Handled user authentication and registration using JWT.
- **Post Service:** Implemented functionality for creating posts, likes, and comments.
- **Connection Service:** Leveraged Neo4j for modelling and managing user connections.
- **Notification Service:** Integrated Kafka for real-time messaging and notifications.
- **Implemented** service discovery and routing using Eureka Discovery Server and API Gateway.
- **Facilitated** inter-service communication using the Feign Client.
- **Containerised** each microservice using Docker for streamlined deployment and scalability.

Travel OS — B2B Travel SaaS Platform | First live tenant: hmxglobaltravels.in **February 2026 – Present**
Lead Developer (Personal Project)— Next.js, Supabase, TypeScript, Spring Boot

- Designed and built a B2B travel SaaS platform end-to-end in **4 months** — public storefront, **~20 admin modules** (bookings, invoices, quotes, leads, suppliers, drivers, agencies, and more), and a back-office CRM — with HMX Global Travels running live as its first tenant.
- Built a CRM pipeline (leads → quotes → bookings → invoices) currently processing **100+ leads/month** across **53 live travel packages**, with role-based access control (RBAC) and dynamic pricing tied to departure cities, dates, and supplier margins.
- Engineered a separate TypeScript vendor data-ingestion service **(hexagonal/clean architecture)** that scrapes and normalizes third-party travel package data via **Playwright**, validates it, and publishes it into Supabase — automated daily via **GitHub Actions**.
- Built a self-triggering **Spring Boot AI content service** using **Claude models and Ollama** to auto-generate destination pages, travel journeys, and blog content, writing directly into Supabase to keep the storefront continuously fresh.
- Built a publishing engine to keep the storefront in sync with admin changes: cache invalidation, search index updates, and sitemap regeneration on content publish.
- Designed a modular architecture separating CRM, publishing, AI generation, and vendor ingestion into independently deployable services.
